RF Components and Subsystems

NANOWAVE Technologies Inc. is a privately owned Canadian manufacturer of advanced high reliability RF and microwave components, modules and subsystems for the Aerospace, Avionics, Defense, Industrial and Medical markets.

At NANOWAVE all critical processes are conducted in-house to provide a controlled supply chain to the end customer over product life spans up to and beyond 20 years. In house processes include:

- Packaging and Housing Technology
- Thin-Film Technology
- Semiconductor Device and MMIC Design
- RF Circuit Engineering
- RF Filter Design
- Circuit Card Design and Manufacturing
- Assembly and Integration
- Electrical and Environmental testing
- Quality Assurance

The foundation of the NANOWAVE product is a proprietary, high reliability, hybrid monolithic integrated circuit (HMIC) process. The HMIC process integrates bare die with in-house thin film circuits which are then hermetically sealed within a modular assembly. The resultant circuits can be sustained over product lifetimes of up to and beyond 20 years without change in module function or physical form fit making NANOWAVE product ideally suited to the high reliability long duration product requirements of aerospace and defense applications.

The RF subassemblies comprise Solid-State Power amplifiers, Up-/Down-Converters, Filters, Synthesizers, Low-Noise Receivers, and Limiters. All RF blocks can be complemented by sophisticated Digital Control Interfaces, which allow interrogation from supervision systems, enabling remote status reporting on all major subsystem parameters, such as voltages, currents, or RF power levels.

NANOWAVE uses the following integrated circuit processes in its HMIC modules and is continuously reviewing and assessing the potential of new technologies to address customer requirements:

- Gallium Nitrid (GaN)
- Gallium Arsenid (GaAs)
- Silicon Germanium (SiGe)
- Bi-polar CMOS (BiCMOS)
- High Power Silicon (LDMOS)
- Indium Phosphide (InP)
COMMERCIAL PRODUCTS

**Product Overview**

NANOWAVE’s product portfolio covers a wide range of RF modules, components, subsystems, systems and sophisticated assemblies for the following Markets:
- Commercial Aerospace
- Defense
- Communications
- Industrial
- Medical

NANOWAVE RF products can be found in applications such as:
- Airborne and Ground-based RADAR
- SatCom
- Terrestrial Communication

NANOWAVE’s Aerospace products can be found on the following platforms:
- A380
- B787
- A320
- B737
- F-18
- P-3

**Fig. 1: Overview on NANOWAVE’s Product Portfolio and Markets**
FACTS ON THE TECHNOLOGY

ACTIVE DEVICE TECHNOLOGY

NANOWAVE uses GaN, GaAs, SiGe, BiCMOS, LDMOS, and InP bare die active devices in its RF subassemblies in order to obtain:

- Best possible thermal management
- High efficiency
- Lowest parasitics
- Smallest size
- Multi-octave matching
- Multi-decade obsolescence mitigation

All RF subassemblies are packaged into hermetically sealed housings to achieve high reliability and high MTBF performance.

KEY TECHNOLOGIES

NANOWAVE has all manufacturing technologies in-house to produce high volumes of complex assemblies. This comprises:

- Engineering
- Chip Design
- Thin Film Technology
- Packaging Technologies (Machining, Reflow)
- Surface Mount Technology (PCB and Ceramic)
- Hybrid Module Assembly (Pick & Place, Eutectic Pick & Place, Automated Wire Bonding)
- Integration
- Test & Tune
- Quality Assurance (Electrical and Environmental testing)

QUALITY ASSURANCE

NANOWAVE Technologies Inc. is certified to the following standards:

- ISO 9001:2008
- AS 9100

The products are qualified and tested according to the following standards:

- DO-160
- MIL-STD-883
- MIL-C-98558A
- MIL-PRF-38534C
SOLID-STATE POWER AMPLIFIERS

The SSPAs comprise a building block architecture based on bare die power devices from various technologies including:

- Gallium Nitride (GaN)
- Gallium Arsenide (GaAs)
- Silicon Germanium (SiGe)
- High Power Silicon (LDMOS)
- Indium Phosphide (InP)

Utilizing bare-die devices in all RF sections, NANOWAVE has full control on thermal and RF characteristics for pulsed and CW operated small-band or broad band circuits. Power amplifier designs range from fast, pulsed to CW operated with very high linearity in both, amplitude and phase behaviour.

SSPA MODULES FOR PULSED OPERATION

NANOWAVE provides a series of SSPA power bricks covering the frequency range from 1 GHz (L-band) to 36 GHz (Ka-band) and output power levels from 10 W to 200 W per module. These power bricks form a Building Block system that enables scaling up of combined output power levels into the kW regime utilizing NANOWAVE’s low-loss power combiners.

Application:

- Weather Radar
- Airborne or Ground-based Radar
- Surveillance Radar
- Reconnaissance Radar

Special Features:

- Arbitrary load capability
- High efficiency GaN (or GaAs)
- High pulse-to-pulse stability
- Low pulse droop
- Large range of pulse width and duty cycle options
- Integrated Modulator and charge capacitor bank
- Integrated Digital Control Functionality (optional)
- Single Supply Voltage (optional)
- Low Rise / Fall Times of < 100 ns
- Digital control interface (I2C, RS232, TCP/IP)
- Operating temperature range -50 °C to +95°C (depending on model and requirement)

COMMERCIAL PRODUCTS

SSPA UNITS FOR PULSED OPERATION

NANOWAVE provides a series of Solid-State Power Amplifier Transmitter units in 19" rack mountable chassis or custom designed housings based on the SSPA power bricks.

The total output power ranges from several 100 W to 10 kW (higher output power possible on request), covering the frequency range from L- to Ka-Band.

Application:
- Weather Radar
- Airborne or Ground-based Radar
- IFF
- Surveillance Radar (e.g. ASR-S)
- Reconnaissance Radar

Special Features:
- Arbitrary load capability
- High efficiency
- High pulse-to-pulse stability
- Low pulse droop
- Large range of pulse width and duty cycle options
- Phase aligned for efficient combining of several units to kW range Transmitter systems
- Digital Control via Ethernet or other interface (proprietary, RS232, I2C, MODBUS, CAN)
- Web Browser based GUI (optional)
- AC supply voltage 110 to 240 V

NANOWAVE Technologies Inc. was founded in 1992 and is a leading Canadian Designer and Manufacturer of Advanced Microwave and Millimeter Wave Components and Sub-Systems for the Radar, Communications, Industrial and Medical markets.

The company’s products can be found on the most advanced commercial and defense aircrafts, as well as ground based Radar and Communication Systems.

NANOWAVE’s commitment to annual investments in R&D combined with in-house control of critical design, manufacturing and test processes results in rapid response to our customers’ demands for:

- Customization
- Obsolescence Mitigation
- Demanding Technical Specifications
- On-time Delivery
- High Reliability
- Traceability
