ABOUT NANOWAVE	6

RF Components and Subsystems

NANOWAVE Technologies Inc. is a privately owned Canadian manufacturer of advanced high reliability RF and microwave components, modules and subsystems for the Aerospace, Avionics, Defense, Industrial and Medical markets.

At NANOWAVE all critical processes are conducted in-house to provide a controlled supply chain to the end customer over product life spans up to and beyond 20 years. In house processes include:

- Packaging and Housing Technology
- Thin-Film Technology
- Semiconductor Device and MMIC Design
- RF Circuit Engineering
- RF Filter Design
- Circuit Card Design and Manufacturing
- Assembly and Integration
- Electrical and Environmental testing
- Quality Assurance

The foundation of the NANOWAVE product is a proprietary, high reliability, hybrid monolithic integrated circuit (HMIC) process. The HMIC process integrates bare die with in-house thin film circuits which are then hermetically sealed within a modular assembly. The resultant circuits can be sustained

over product lifetimes of up to and beyond 20 years without change in module function or physical form fit making NANOWAVE product ideally suited to the high reliability long duration product requirements of aerospace and defense applications.

The RF subassemblies comprise Solid-State Power amplifiers, Up-/Down-Converters, Filters, Synthesizers, Low-Noise Receivers, and Limiters. All RF blocks can be complemented by sophisticated Digital Control Interfaces, which allow interrogation from supervision systems, enabling remote status reporting on all major subsystem parameters, such as voltages, currents, or RF power levels.

NANOWAVE uses the following integrated circuit processes in its HMIC modules and is continuously reviewing and assessing the potential of new technologies to address customer requirements:

- Gallium Nitride (GaN)
- Gallium Arsenide (GaAs)
- Silicon Germanium (SiGe)
- Bi-polar CMOS (BiCMOS)
- High Power Silicon (LDMOS)
- Indium Phosphide (InP)

Product Overview

NANOWAVE's product portfolio covers a wide range of RF modules, components, subsystems, systems and sophisticated assemblies for the following Markets

- Commercial Aerospace
- Defense
- Communications
- Industrial
- Medical

NANOWAVE RF products can be found in applications such as

- Airborne and Ground-based RADAR
- SatCom
- Terrestrial Communication

NANOWAVE's Aerospace products can be found on the following platforms

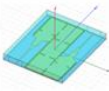

Category Market	GaAs / GaN Die	Thin Film	Transmitter < 400 W	Transmitter > 400 W	Signal Sources	Frequency Converter	High-Power Transceiver	Broadband SSPA	Active Array
Commercial Aerospace (CA)	 GaAs/GaN FET & MMIC	 nF Capacitor	 100/200 W Gann			 Miniature Tx / Rx			
Defense		 Thick Copper substrate	 400 W X-Band Tx	 4 kW L-Band (Pulsed)	 L- to X-Band Synthesizer	 Data Link Tx/Rx		 6 to 18 GHz 1.5 W CW	
SatCom & Fiber Optics		 LASER Mount	 200 W INMARSAT Tx						 Ka-Band Array
Industrial		 5-pole SIW Filter		 600 W X-Band (Pulsed)	 C-Band STALO	 X-Band RADAR Test Set		 2-4 GHz 100W CW SSPA	
Medical		 Quartz Capacitor

FACTS ON THE TECHNOLOGY

ACTIVE DEVICE TECHNOLOGY

NANOWAVE uses GaN, GaAs, SiGe, BiCMOS, LDMOS, and InP bare die active devices in its RF subassemblies in order to obtain

- Best possible thermal management
- High efficiency
- Lowest parasitics
- Smallest size
- Multi-octave matching
- Multi-decade obsolescence mitigation

All RF subassemblies are packaged into hermetically sealed housings to achieve high reliability and high MTBF performance.

KEY TECHNOLOGIES

NANOWAVE has all manufacturing technologies in-house to produce high volumes of complex assemblies. This comprises

- Engineering
- Chip Design
- Thin Film Technology
- Packaging Technologies (Machining, Reflow)
- Surface Mount Technology (PCB and Ceramic)

QUALITY ASSURANCE

NANOWAVE Technologies Inc. is certified to the following standards

- ISO 9001:2008
- AS 9100

The products are qualified and tested according to the following standards:

- DO-160
- MIL-STD-883
- MIL-C-9858A
- MIL-PRF-38534C

- Hybrid Module Assembly (Pick & Place, Eutectic Pick & Place, Automated Wire Bonding)
- Integration
- Test & Tune
- Quality Assurance (Electrical and Environmental testing)

FREQUENCY BAND DEFINITION

Band	Frequency Range
L	1.0 - 2.0
S	2.0 - 4.0
C	4.0 - 8.0
X	8.0 - 12.0
Ku	12.0 - 18.0
Ka	28.0 - 32.0
BB	Broad band (multi octave)

UP- / DOWN-CONVERTER AND MULTIPLIER

FREQUENCY MULTIPLIER MODULES

NANOWAVE's Frequency Multiplier Modules are based on Step recovery Diode (SRD) technology and allow different frequency multiplication factors ranging from x4 to x12.

The Multiplier Modules are hermetically sealed and are based on NANOWAVE's Hybrid Miniaturized Integrated Circuit (HMIC) Technology.

Applications:

- Radar Front-Ends
- Wireless Communication systems

Special Features:

- Input frequency from UHF to L-band (or higher)
- Include custom designed filters
- SRD device (Step-Recovery-Diode) for multiplication
- Multiplication factors range from x4 to x12
- Comprise buffer and gain stages
- RF power detector at output (optional)
- SMA input and output connectors
- Wide operating temperature range

(individual modules may vary in shape and size)

Selection Guide for Multiplier Modules

Model Number	Band Input/ Output	Input Frequency MHz	Input Bandwidth MHz	X Factor	Output Frequency GHz	P1dB dBm	Harmonics dBc	Operating Temperature °C	Size inch
NWMUX0612-12	UHF/X	779	6	12	9.348	+12	-50	-15 - +85	3.16 x 2.25 x 0.6
NWMUX0112-12	UHF/X	764	1	12	9.168	+12	-50	-15 - +85	3.16 x 2.25 x 0.6
NWMLX1406-13	L/X	1560	14	6	9.36	+13	-50	-55 - +85	3.50 x 2.23 x 0.47
NWMLX1306-11	L/X	1529	13	6	9.174	+11	-50	-55 - +85	4.47 x 1.47 x 0.52
NWMLX0605-12	L/X	1894	6	5	9.47	+12	-50	-55 - +70	0

All specifications are subject to change without notice.

ABOUT NANOWAVE

NANOWAVE Technologies Inc. was founded in 1992 and is a leading Canadian Designer and Manufacturer of Advanced Microwave and Millimeter Wave Components and Sub-Systems for the Radar, Communications, Industrial and Medical markets.

The company's products can be found on the most advanced commercial and defense aircrafts, as well as ground based Radar and Communication Systems.

NANOWAVE's commitment to annual investments in R&D combined with in-house control of critical design, manufacturing and test processes results in rapid response to our customers' demands for:

- Customization
- Obsolescence Mitigation
- Demanding Technical Specifications
- On-time Delivery
- High Reliability
- Traceability
